Anil Lama

Dallas, TX

Senior Java Backend Developer

5+ years of experience in designing, developing, and delivering scalable, high-performance web and enterprise applications.

Summary

- Expertise in **backend development** using **Spring Boot**, **Microservices**, and **REST APIs** to build scalable, high-performance enterprise services across financial and healthcare domains.
- Deep knowledge of open-source frameworks like **Spring Framework**, **Spring Security**, **Spring Integration**, and **Hibernate**.
- Proficient in core Spring modules: **Spring IOC, Core, Messaging, ORM,** and **MVC**.
- Strong background in **Java 8**, including **Collections**, **Multi-Threading**, **Java 8 Streams**, **RMI**, **Serialization**, **Synchronization**, **Exception Handling**, and **Performance Tuning**.
- Experience with **agile methodologies** like **TDD** and **SCRUM**, and proficient in tools like **Git** and **JIRA**.
- Experienced in **cloud integrations** using **AWS (S3)** and front-end technologies (**Angular**, **HTML5**, **CSS3**) with a primary focus on **backend services** and **API design**.
- Experience working with databases like **Oracle**, **MySQL**, **PostgreSQL**, and **SQL Server** and implementing **ORM** using **Hibernate** and **JPA**.
- Hands-on experience with **web services** (**REST APIs**, **Microservices**), and integration tools like **Kafka**.
- Skilled in **CI/CD pipelines** using tools like **Maven**, **Jenkins**, **Git**, and **Docker**.
- **AI Tools:** Familiar with modern AI-assisted development tools such as ChatGPT, GitHub Copilot, and Gemini for code generation, debugging, and productivity.

Technical Skills

- **Languages: Java** 7/8/11, SQL, PL/SQL, **Python**, C, C++
- **Java/J2EE Technologies:** J2EE, Servlets, JSP, JDBC, Spring Boot, Spring MVC, Hibernate, JPA, Web Services
- **Web Technologies:** HTML5, CSS3, JavaScript, AJAX, JSP, Angular
- **Frameworks and IDEs:** Spring, Spring Boot, Hibernate, JPA, **Django** IntelliJ IDEA, Cursor, Eclipse
- **Application Servers:** Apache Tomcat, WebLogic, WebSphere
- **Databases:** Oracle, SQL Server, PostgreSQL, MySQL
- **Messaging & Streaming:** Apache Kafka
- **Cloud:** AWS (S3, IAM)
- **Version Control Tools:** Git, GitHub, Bitbucket
- **Build & CI/CD Tools:** Maven, ANT, Jenkins, Docker
- **Web Services:** REST APIs, Microservices, SOAP
- **Operating Systems:** Windows, Linux, UNIX
- **Methodologies:** Agile, Scrum, SDLC, Iterative, TDD
- **Productivity & Collaboration Tools:** Jira, Confluence, ChatGPT, GitHub Copilot

Education

Master of Science in Artificial Intelligence *(In Progress)*
Texas A&M University, TX
Expected Graduation: **Fall 2027**

Bachelor of Science in Computer Science (2019)
California State University, East Bay, Hayward, CA

Professional Experience

Client: JPMorgan Chase – Plano, TX
Jan 2026 – Present
Java Developer – Backend

Responsibilities:

- Designed and developed **RESTful APIs** for handling financial **metadata** using **Spring Boot**, enabling seamless ingestion, transformation, and retrieval of structured data across internal platforms.
- Integrated **Amazon S3** for scalable and durable storage of metadata artifacts, implementing bucket policies, lifecycle rules, and pre-signed URL generation for secure data access.
- Built and maintained **microservices** following domain-driven design principles, ensuring loose coupling and high cohesion across the financial data platform.
- Collaborated with data engineering teams to define **API contracts** and **Swagger/OpenAPI** documentation, improving developer onboarding and cross-team integration.
- Implemented **security best practices** including **OAuth 2.0** and **JWT-based authentication** to protect sensitive financial metadata endpoints in compliance with enterprise security standards.
- Participated in **Agile sprints**, collaborating with product managers and architects to deliver incremental features aligned with business requirements.
- Wrote comprehensive **unit and integration tests** using **JUnit** and **Mockito**, maintaining high code coverage and reliability standards for production services.
- Leveraged **CI/CD pipelines** via **Jenkins** and **Maven** to automate build, test, and deployment workflows, reducing release cycle time.

Technologies Used: Java, Spring Boot, Microservices, REST APIs, Amazon S3, AWS, Hibernate, JUnit, Mockito, Maven, Jenkins, Git, Docker, OAuth 2.0, JWT, Swagger, Agile, IntelliJ

Client: Hilton Hotels – McLean, VA
May 2024 – Nov 2025
Java Developer – Backend

Responsibilities:

- Designed and developed **microservices** architecture using **Java** and **Spring Boot** to build scalable, modular back-end services for Hilton's internal hotel management systems.

- Implemented **RESTful APIs** to ensure seamless communication between microservices and external systems, improving real-time data exchange.

- Utilized **PostgreSQL** for efficient data storage and optimized query performance, ensuring transactional consistency for hotel management applications.
- Integrated **Kafka** to support real-time data streaming, enabling near-instantaneous communication across microservices.
- Worked closely with cross-functional teams to optimize features for **reservations**, **billing**, and **customer management** systems.
- Ensured system security by implementing **authentication**, **authorization**, and encryption methods, adhering to industry standards.
- Conducted **unit tests** and **integration tests** using **JUnit**, ensuring high-quality code and performance optimization.
- Supported **CI/CD** pipelines, leveraging **Maven** and **Git** for version control and automated deployment.
- Provided **production support** by troubleshooting issues related to performance, data consistency, and system uptime.
- Collaborated with **DevOps** teams to automate build and release pipelines, reducing manual intervention and deployment errors.
- Authored and maintained technical documentation for **APIs**, deployment workflows, and architectural diagrams to support cross-team understanding.
- **Mentored junior developers** through code reviews, pair programming, and debugging sessions; fostered a culture of quality and knowledge sharing within the team.

Technologies Used: Java, Spring Boot, Microservices, Kafka, PostgreSQL, REST APIs, Hibernate, JUnit, Maven, Git, Tomcat, Log4j, JSON, Docker, Kubernetes, Agile, IntelliJ

Client: PNC Bank – Pittsburgh, PA
Nov 2022 – May 2024
Full Stack Java Developer

Responsibilities:

- Developed **full-stack** applications using **Angular** for dynamic front-end interfaces and **Java** with **Spring Boot** for back-end services.
- Implemented **RESTful APIs** to enable secure and scalable communication between front-end and back-end components.
- Utilized **Hibernate** for **ORM**, optimizing database interactions and maintaining data integrity.
- Designed and implemented **data migration pipelines** and system integrations, ensuring zero-downtime transitions and full data integrity across banking platforms.
- Collaborated with cross-functional teams to optimize features in **transaction processing**, **risk management**, and **account management**.

- Engaged in **Agile sprints**, participated in **code reviews**, and ensured timely delivery of features.
- Strengthened API security by implementing **OAuth 2.0** and **JWT** token validation, enforcing role-based access control across banking microservices and reducing unauthorized access risks.
- Resolved performance bottlenecks by optimizing **SQL queries** and refactoring backend code.
- Supported **HR applications** using **Angular** and **Spring Boot**, ensuring secure and responsive web interfaces.
- Played a key role in system integration and data migration efforts.

Technologies Used: Java 8, J2EE, Spring Boot, Spring MVC, Hibernate, REST APIs, Angular, HTML, CSS, JavaScript, Microservices, SQL, Oracle, Tomcat, Log4j, JUnit, JSON, Maven, Git, Eclipse IDE, Agile, Scrum, Kubernetes, OAuth, JWT

Client: United Health Group – Minnesota, MN
April 2022 – Oct 2022
Full Stack Software Developer
Responsibilities:

- Contributed to **healthcare systems modernization** across the full **SDLC** — from requirements gathering and design through development and production deployment.
- Developed **RESTful** microservices using **Spring MVC** and **Spring Boot** to support healthcare data interoperability.
- Worked on **EDI 278 A/N/I** transactions to automate healthcare authorization processes.
- Built complex **PL/SQL** procedures and optimized **SQL** queries for patient data aggregation.
- Enhanced front-end modules using **JSP**, **JavaScript**, and **Angular** to improve claim status visibility.
- Automated test execution and reporting using **JUnit**, **Mockito**, and **Jenkins** integration.
- Collaborated with **QA** teams to build test automation **scripts** for healthcare workflows.
- Designed **REST API** contracts and contributed to **Swagger** documentation for cross-team integration.
- Configured **Docker-based** containers for development environments to ensure consistent builds.
- Participated in sprint **retrospectives** to propose process **optimizations** and reduce release cycles.
- Strong understanding of **Domain-Driven Design (DDD)** principles, with experience designing and developing **microservices architectures** from **monolithic systems**
- Provided **on-call production support** for critical healthcare workflows, diagnosing and resolving high-priority incidents to maintain system availability and data integrity.

Technologies Used: Java/J2EE, Spring MVC, Spring Boot, Hibernate, REST APIs, Angular, Oracle, JSP, JavaScript, Microservices, SQL, MongoDB, JMS, Docker, Kubernetes, Junit, Git, Linux, Agile, Scrum

---

Client: FirstBank – Lakewood, CO

May 2021 – March 2022
Java Developer – Backend

Responsibilities:

- Developed and enhanced backend services for the ICM Wires application, handling high-value cash transactions.
- Built **REST APIs** and integrated them with **front-end** systems for seamless fund transfer operations.
- Wrote and tuned **SQL** queries, views, and stored procedures for performance and reliability.
- Applied **Spring MVC** and **JPA** for building reusable backend components and persistence layers.
- Automated build and deployment workflows using **Jenkins** and **Maven**.
- Collaborated with QA teams to design regression and integration test suites.
- Introduced **API** versioning and error-handling frameworks for better maintainability.
- Implemented **logging**, **auditing**, and **transaction** tracking using **Log4j** and custom monitoring scripts.
- Gained hands-on experience in **financial transaction processing**, building reliable backend services for high-value wire transfers with strict compliance and auditability requirements.
- Supported production deployments and resolved time-sensitive incidents with minimal downtime.
- Enforced **role-based access control** and input **validation** frameworks to safeguard high-value wire transfer operations against unauthorized access and data integrity issues.
- Created technical documentation for **modules**, service endpoints, and configuration details.

Technologies Used: Java/J2EE, Spring Boot, Spring MVC, Microservices, REST APIs, SQL, Oracle, WebSphere, Log4j, JUnit, Git, Maven, Jenkins, Postman, ANT, Agile
