Anil Lama

Dallas, TX

Senior Java Backend Developer

6 years of experience in designing, developing, and delivering scalable, high-performance web and enterprise applications.

Summary

- Expertise in **backend development** using **Spring Boot**, **Microservices**, and **REST APIs** to build scalable, high-performance enterprise services across financial and healthcare domains.
- Deep knowledge of open-source frameworks like **Spring Framework**, **Spring Security**, **Spring Integration**, and **Hibernate**.
- Proficient in core Spring modules: **Spring IOC, Core, Messaging, ORM,** and **MVC**.
- Strong background in **Java 8**, including **Collections**, **Multi-Threading**, **Java 8 Streams**, **RMI**, **Serialization**, **Synchronization**, **Exception Handling**, and **Performance Tuning**.
- Experience with **agile methodologies** like **TDD** and **SCRUM**, and proficient in tools like **Git** and **JIRA**.
- Experienced in **cloud integrations** using **AWS (S3)** and front-end technologies (**Angular**, **HTML5**, **CSS3**) with a primary focus on **backend services** and **API design**.
- Experience working with databases like **Oracle**, **MySQL**, **PostgreSQL**, and **SQL Server** and implementing **ORM** using **Hibernate** and **JPA**.
- Hands-on experience with **web services** (**REST APIs**, **Microservices**), and integration tools like **Kafka**.
- Skilled in **CI/CD pipelines** using tools like **Maven**, **Jenkins**, **Git**, and **Docker**.
- **AI Tools:** Familiar with modern AI-assisted development tools such as ChatGPT, GitHub Copilot, and Gemini for code generation, debugging, and productivity.

Technical Skills

- **Languages: Java** 7/8/11, SQL, PL/SQL, **Python**, C, C++
- **Java/J2EE Technologies:** J2EE, Servlets, JSP, JDBC, Spring Boot, Spring MVC, Hibernate, JPA, Web Services
- **Web Technologies:** HTML5, CSS3, JavaScript, AJAX, JSP, Angular
- **Frameworks and IDEs:** Spring, Spring Boot, Hibernate, JPA, **Django** IntelliJ IDEA, Cursor, Eclipse
- **Application Servers:** Apache Tomcat, WebLogic, WebSphere
- **Databases:** Oracle, SQL Server, PostgreSQL, MySQL
- **Messaging & Streaming:** Apache Kafka
- **Cloud:** AWS (S3, IAM)
- **Version Control Tools:** Git, GitHub, Bitbucket
- **Build & CI/CD Tools:** Maven, ANT, Jenkins, Docker
- **Web Services:** REST APIs, Microservices, SOAP
- **Operating Systems:** Windows, Linux, UNIX
- **Methodologies:** Agile, Scrum, SDLC, Iterative, TDD
- **Productivity & Collaboration Tools:** Jira, Confluence, ChatGPT, GitHub Copilot

Education

Master of Science in Artificial Intelligence *(In Progress)*
Texas A&M University, TX
Expected Graduation: **Fall 2027**

Bachelor of Science in Computer Science (2019)
California State University, East Bay, Hayward, CA

Professional Experience

Client: JPMorgan Chase – Plano, TX
Jan 2026 – Present
Java Developer – Backend

Responsibilities:

- Designed and developed **RESTful APIs** for handling financial **metadata** using **Spring Boot**, enabling seamless ingestion, transformation, and retrieval of structured data across internal platforms.
- Integrated **Amazon S3** for scalable and durable storage of metadata artifacts, implementing bucket policies, lifecycle rules, and pre-signed URL generation for secure data access.
- Built and maintained **microservices** following domain-driven design principles, ensuring loose coupling and high cohesion across the financial data platform.
- Collaborated with data engineering teams to define **API contracts** and **Swagger/OpenAPI** documentation, improving developer onboarding and cross-team integration.
- Implemented **security best practices** including **OAuth 2.0** and **JWT-based authentication** to protect sensitive financial metadata endpoints in compliance with enterprise security standards.
- Participated in **Agile sprints**, collaborating with product managers and architects to deliver incremental features aligned with business requirements.
- Wrote comprehensive **unit and integration tests** using **JUnit** and **Mockito**, maintaining high code coverage and reliability standards for production services.
- Leveraged **CI/CD pipelines** via **Jenkins** and **Maven** to automate build, test, and deployment workflows, reducing release cycle time.

Technologies Used: Java, Spring Boot, Microservices, REST APIs, Amazon S3, AWS, Hibernate, JUnit, Mockito, Maven, Jenkins, Git, Docker, OAuth 2.0, JWT, Swagger, Agile, IntelliJ

Client: Hilton Hotels – McLean, VA
May 2024 – Nov 2025
Java Developer – Backend

Responsibilities:

- Designed and developed **microservices** architecture using **Java** and **Spring Boot** to build scalable, modular back-end services for Hilton's internal hotel management systems.

- Implemented **RESTful APIs** to ensure seamless communication between microservices and external systems, improving real-time data exchange.

- Utilized **PostgreSQL** for efficient data storage and optimized query performance, ensuring transactional consistency for hotel management applications.
- Integrated **Kafka** to support real-time data streaming, enabling near-instantaneous communication across microservices.
- Worked closely with cross-functional teams to optimize features for **reservations**, **billing**, and **customer management** systems.
- Ensured system security by implementing **authentication**, **authorization**, and encryption methods, adhering to industry standards.
- Conducted **unit tests** and **integration tests** using **JUnit**, ensuring high-quality code and performance optimization.
- Applied **lazy** loading, route guards, and Angular's HttpClient module to optimize performance and secure API communication between the front-end and Spring Boot services.
- Managed application state using **Angular** services and BehaviorSubjects (RxJS), ensuring consistent data flow across reservation.
- Supported **CI/CD** pipelines, leveraging **Maven** and **Git** for version control and automated deployment.
- Provided **production support** by troubleshooting issues related to performance, data consistency, and system uptime.
- Collaborated with **DevOps** teams to automate build and release pipelines, reducing manual intervention and deployment errors.
- Authored and maintained technical documentation for **APIs**, deployment workflows, and architectural diagrams to support cross-team understanding.
- **Mentored junior developers** through code reviews, pair programming, and debugging sessions; fostered a culture of quality and knowledge sharing within the team.

Technologies Used: Java, Spring Boot, Angular, Microservices, Kafka, PostgreSQL, REST APIs, Hibernate, JUnit, Maven, Git, Tomcat, Log4j, JSON, Docker, Kubernetes, Agile, IntelliJ

Client: United Health Group – Minnesota, MN
April 2022 – April 2024
Full Stack Software Developer
Responsibilities:

- Developed **RESTful** microservices using **Spring MVC** and **Spring Boot** to support healthcare data interoperability.
- Worked on **EDI 278 A/N/I** transactions to automate healthcare authorization processes.
- Built complex **PL/SQL** procedures and optimized **SQL** queries for patient data aggregation.

- Enhanced front-end modules using **JSP**, and **JavaScript** to improve claim status visibility.
- Automated test execution and reporting using **JUnit**, **Mockito**, and **Jenkins** integration.
- Designed **REST API** contracts and contributed to **Swagger** documentation for cross-team integration.
- Configured **Docker-based** containers for development environments to ensure consistent builds.
- Participated in sprint **retrospectives** to propose process **optimizations** and reduce release cycles.
- Strong understanding of **Domain-Driven Design (DDD)** principles, with experience designing and developing **microservices architectures** from **monolithic systems**
- Provided **on-call production support** for critical healthcare workflows, diagnosing and resolving high-priority incidents to maintain system availability and data integrity.

Technologies Used: Java/J2EE, Spring MVC, Spring Boot, Hibernate, REST APIs, Angular, Oracle, JSP, JavaScript, Microservices, SQL, MongoDB, JMS, Docker, Kubernetes, Junit, Git, Linux, Agile, Scrum

---

Client: FirstBank – Lakewood, CO

May 2021 – March 2022
Java Developer – Backend

Responsibilities:

- Developed and enhanced backend services for the ICM Wires application, handling high-value cash transactions.
- Built **REST APIs** and integrated them with **front-end** systems for seamless fund transfer operations.
- Wrote and tuned **SQL** queries, views, and stored procedures for performance and reliability.
- Applied **Spring MVC** and **JPA** for building reusable backend components and persistence layers.
- Automated build and deployment workflows using **Jenkins** and **Maven**.
- Collaborated with QA teams to design regression and integration test suites.
- Introduced **API** versioning and error-handling frameworks for better maintainability.
- Implemented **logging**, **auditing**, and **transaction** tracking using **Log4j** and custom monitoring scripts.
- Gained hands-on experience in **financial transaction processing**, building reliable backend services for high-value wire transfers with strict compliance and auditability requirements.
- Supported production deployments and resolved time-sensitive incidents with minimal downtime.
- Enforced **role-based access control** and input **validation** frameworks to safeguard high-value wire transfer operations against unauthorized access and data integrity issues.
- Created technical documentation for **modules**, service endpoints, and configuration details.

Technologies Used: Java/J2EE, Spring Boot, Spring MVC, Microservices, REST APIs, SQL, Oracle, WebSphere, Log4j, JUnit, Git, Maven, Jenkins, Postman, ANT, Agile
